Guidelines, Standards, & Ordinances

HDBR Guidelines:

Madison Historic District Design Guidelines – 24.0 NEW CONSTRUCTION — OUTBUILDINGS p. 101-102

24.1 The design of new garages and other accessory buildings should be compatible with dwellings in the historic district. New outbuildings should respect and blend with the architectural style and scale of the associated dwelling.

24.2 Site new garages and accessory buildings appropriately on the lot. Locate detached new garages and outbuildings to the rear of a dwelling or set back from the side elevations. Attached garages and accessory buildings should be set back from the front façade of the primary dwelling at least one-third of the total depth of the dwelling.

24.3 If reconstruction of a missing garage or outbuilding is desired, it should be based on accurate evidence of the original configuration, form, massing, style, placement, and detail from photographic evidence or other documentation of the original building.

24.4 The outbuilding should maintain a proportional mass, size, and height to ensure it is not taller or wider than the principal building on the lot.

24.5 Materials used for new garages and outbuildings should reflect the historical development of the property. Materials used at exterior façades of garages and outbuildings were often different (and less costly) than that of the main dwelling. Materials that are appropriate for new secondary buildings include wood or brick. If frame buildings are constructed, alternative materials may be considered if they resemble traditional wood siding in texture, dimension, and overall appearance. Materials such as T1-11 siding, plywood and oriented strand board (OSB) are not sufficiently durable for exterior use and are not appropriate.

24.6 Generally, the eaves and roof ridge of any new outbuilding should not be higher than those of the existing primary building.

24.7 Windows which are readily visible from the public right-of-way should be appropriate to the style of the house. Visible pedestrian doors should either be appropriate for the style of house to which the outbuilding relates or be flat with no panels.

24.8 Metal garage doors with a paneled design may be appropriate. These doors can be used on garages that are located at the back of the lot and are minimally visible from the street or public right-of-way. If the garage and garage doors are highly visible from a public street or located on a corner lot, solid wood or wood garage doors with a paneled design are more appropriate.

24.9 At double garages, two single garage doors rather than one larger, double door should be installed. This will maintain the scale and rhythm of older structures, making a two-car garage seem smaller and more compatible with the primary dwelling.

24.10 New carports should be located at the rear of dwellings and not visible. Most carport designs have flat roofs and metal support columns and are not compatible with historic dwelling designs.

Conformance with Guidelines, Ordinance & Standards:

The project is in conformance with Guidelines.

Ordinance:

151.34 Visual Compatibility Factors

- (A) Height. The height of proposed buildings shall be visually compatible with adjacent buildings.
- (B) Proportion of building's front facade. The relationship of the width of building to the height of the front elevation shall be visually compatible to buildings, squares, and places to which it is visually related.
- (C) Proportion of openings within the facility. The relationship of the width of the windows to height of windows in a building shall be visually compatible with buildings, squares, and places to which the building is visually related.
- (D) Rhythm of solids to voids in front facades. The relationship of solids to voids in the front facade of a building shall be visually compatible with buildings, squares, and places to which it is visually related.
- (E) Rhythm of spacing of buildings on streets. The relationship of the building to open space between it and adjoining buildings shall be visually compatible to the buildings, squares, and places to which it is visually related.
- (F) Rhythm of entrance or porch projection. The relationship of entrances and porch projections to sidewalks of buildings, squares, and places shall be visually compatible to the buildings to which it is visually related.
- (G) Relationship of materials, and texture. The relationship of materials, and texture of the facade of a building shall be visually compatible with the predominant materials used in the buildings to which it is visually related.
- (H) Roof shapes. The roof shape of a building shall be visually compatible with the buildings to which it is visually related.
- (I) Walls of continuity. Appurtenances of a building such as walls, wrought iron, fences, evergreen landscape masses, and building facades, shall, if necessary, form cohesive walls of enclosure along a street, to insure visual compatibility of the building to the buildings, squares, and places to which it is visually related.
- (J) Scale of a building. The size of a building, the building mass of a building in relation to open spaces, the windows, door openings, porches, and balconies shall be visually compatible with the buildings, squares, and places to which it is visually related.

Secretary of the Interior Standards:

Standards for Rehabilitation

- 2. A property will be used as it was historically or be given a new use that requires minimal change to its distinctive materials, features, spaces and spatial relationships.
- 11. New additions, exterior alterations, or related new construction will not destroy historic materials, features, and spatial relationships that characterize the property. The new work will be differentiated from the old and will be compatible with the historic materials, features, size, scale and proportion, and massing to protect the integrity of the property and its environment.
- 12. New additions and adjacent or related new construction will be undertaken in such a manner that, if removed in the future, the essential form and integrity of the historic property and its environment would be unimpaired.

Garage

Description(s) of Work

Scope of Work*

I am looking to replace the existing garage. I have zoning in the works, as well as my permit. I was informed just now I need to get approval. The building will be nearly identical. I am just going with a pole barn in its place, same location, the colors should be similar to the house.

This is an example of what I plan on putting back in this current place. The color should be closer to the tan./brown of the current house. Awaiting approval from the zoning board to replace the existing structure.
